

Feelgood designs

Create a feelgood environment.

Catalogue Europe • January 2026

'We create furniture that makes people feel good,
because we believe when people feel good, they work, relax and live better.'

An Australian company

Feelgood Designs was established in 2001 in Melbourne, Australia. With a focus on natural materials, innovative design and quality, our furniture helps to create warm, human-oriented 'feelgood' environments. Through collaborations with selected designers we endeavour to provide enduring furniture solutions that combine the best of traditional craftsmanship with modern day manufacturing and high quality materials.

What goes into making a piece of furniture feel good?

It's the carefully selected materials that feel good to touch and add warmth to a room.

It's the meticulous craftsmanship and attention to every detail that entices you to run your hand along a beautifully crafted surface.

It's the enduring quality of our designs that ensures they remain contemporary for decades to come.

Why we love rattan...

Ideal for use in furniture, rattan naturally embodies many of the properties high tech materials try to emulate. Its high strength and flexibility enables the formation of organic shapes that mould to the user's body. Rattan's excellent breathability and low thermal conductivity improve user comfort and help the body to maintain a constant temperature.

Our handwoven production process consumes minimal energy, provides employment to struggling communities and helps to keep this traditional craft alive.

Rattan is a biodegradable, renewable resource. When managed sustainably rattan leaves a small environmental footprint.

marta b.v. is the exclusive importer and agent for Feelgood Designs in Europe since 2013, serving the professional market, with offices in Belgium and the Netherlands.

Rattan in general

Also known as 'wicker' rattan is a climbing palm with over 600 species that grows in tropical regions of Asia and Africa. Rattan is a rapidly renewable resource that is 100% biodegradable. Its fast, climbing growth habit and potential as a Non Timber Forest Product (NTFP) can encourage sustainable forest practices that protect existing vegetation. Rattan harvesting and associated industries providing employment and positive social welfare benefits to local communities. The material natural exhibits many of the qualities that are desirable for furniture manufacturing. It is thermally stable, strong and its flexibility allows it to be woven into organic shapes that mould to the user's body. Products made from rattan consume considerably less energy and emit less greenhouse gasses compared to similar products made with synthetic materials.

Rattan poles

A common term used to describe various species of larger diameter rattan. Sizes range from 8mm to 40mm in diameter. Pale blond in colour with uniform diameter and texture.

This material will develop a honey patina over time with exposure to light.

Suitable for indoor use only.

Rattan core (split rattan)

3mm round weaving material processed from the centre (core) of larger rattan poles. Pale blond in colour with uniform diameter and texture.

This material will develop a honey patina over time with exposure to light.

Suitable for indoor use only.

Rattan slimit / Rattan pulut

An unprocessed rattan species with hard outer skin. 3 to 4mm in diameter, the colour naturally varies from pale oak to tan.

With an outer protective skin this species is one of the most resilient weaving materials available.

Suitable for indoor use only.

Rattan peel

5mm in width, flat weaving material made from the outer skin of rattan poles. Pale blond in colour with uniform width.

This material will develop a honey patina over time with exposure to light.

Suitable for indoor use only.

Polyethylene core

3mm round synthetic rattan made from polyethylene (PE).

Although polyethylene contains UV stabilisers some fading will still occur with prolonged outdoor use.

Suitable for both indoor and outdoor use or applications with a high incidence of spills.

Polyethylene material can be recycled. Suitable for outdoor use.

Polyethylene peel

5mm flat half oval shaped synthetic peel made from polyethylene (PE).

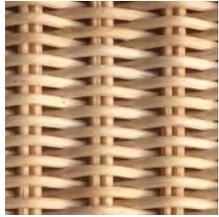

Although polyethylene contains UV stabilisers some fading will still occur with prolonged outdoor use.

Suitable for both indoor and outdoor use or applications with high incidence of spills.

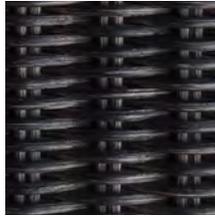

Polyethylene material can be recycled. Suitable for outdoor use.

Maintenance & care of rattan

Maintenance

- Occasionally clean chairs with a soft lint free cloth or duster.
- Spills can be removed with a damp soft sponge or lint free cloth that has been soaked in warm water.
- Do not use excessive amounts of water and ensure rattan is dry before re-use.
- Do not use scourers or harsh detergents as these may damage the coatings.
- Check and replace plastic feet if necessary.

Care

- Do not stand on chairs.
- Do not place any heavy or sharp objects on chairs.
- Do not knock or rub chairs against walls, tables or surfaces that may damage the weaving.
- Do not place wet objects on indoor items.
- Do not use rattan chairs outdoors or in damp, wet areas such as bathrooms.
- Stacking chairs should be stacked with care to avoid damage.

T'ALPH table

by Philippe Allaey

A table for two !

The **T'ALPH table** brief: design a table for two that meets the demands of clients in the hospitality industry – beauty, functionality and tough enough to stand intensive use in reception areas. Above all, not square and no sharp corners.

That's where Belgian architect and designer **Philippe Allaey** came in. He was selected by the **marta**; team due to his comprehensive knowledge of the industry and his unequivocal talent as a designer.

He designed a table with light, fluid lines, its top an organic form resting on a central leg, descending to a baseplate that echoes the top with a slight asymmetry.

Presenting the **T'ALPH tables** in three sizes and two heights. An exclusive design in a two or four-seat version and a low table for a cosy low-dining experience.

T'ALPH table

by Philippe Allaey

petit T'ALPH

450 x 600

T'ALPH bistrot

580 x 780

grand T'ALPH

756 x 1000

VARIATIONS
